CHAPTER 1
Skeletal Muscle Anatomy ............... 1
Chapter Overview ........................................ 1
Educational Objectives ........................... 1
Muscle Development ............................ 1
Skeletal Muscle Cell Microstructure ............ 11
Whole Skeletal Muscle Structure .............. 22
Chapter Summary ................................. 38
References ......................................... 39

CHAPTER 2
Skeletal Muscle Physiology .......... 41
Chapter Overview ................................. 41
Educational Objectives ......................... 41
Muscle Fiber Activation ......................... 41
Skeletal Muscle Mechanics ...................... 46
Muscle Fiber Types and Motor Units .......... 64
The Motor Unit ................................ 76
Chapter Summary ................................. 89
References ......................................... 90

CHAPTER 3
The Production of Movement .......... 93
Chapter Overview ................................. 93
Educational Objectives ......................... 93
Muscle–Tendon Interaction ..................... 93
Joint Moments ................................ 103
Muscle–Joint Interaction during Isometric Torque Production ....................... 107
Physiological Range of Motion .................. 116
Isokinetic Dynamometers Used in Physical Assessment ......................... 119
The Gait Cycle ................................ 124
Biomechanics of Biarticular Muscles ........... 129
Gait Cycle Timing at Increased Velocities ....... 131
Energy Expenditure during Gait ............... 131
Muscles as Springs ................................ 131
Direct Force and Length Measurements during Locomotion ....................... 134
Implications for Physical Therapy ............. 136
Chapter Summary ................................. 137
References ......................................... 137

CHAPTER 4
Skeletal Muscle Adaptation to Increased Use ..................... 141
Chapter Overview ................................. 141
Educational Objectives ......................... 141
Adaptation to Chronic Electrical Stimulation .......... 141
Adaptation to Chronic Stretch .................... 147
Adaptation to Compensatory Hypertrophy .......... 158
Adaptation to Intermittent Electrical Stimulation ........ 161
Adaptation to Exercise ......................... 171
Chapter Summary ................................. 180
References ......................................... 180

CHAPTER 5
Skeletal Muscle Adaptation to Decreased Use .......... 183
Chapter Overview ................................. 183
Educational Objectives ......................... 183
Adaptation to Immobilization .................... 183
Remobilization after Immobilization ............. 192
Adaptation to Spinal Cord Transection .......... 192
Adaptation to Hindlimb Unloading ............... 199
Mechanism of Muscle Fiber Atrophy ............. 203
Adaptation to Aging ................................ 207
Adaptation to Tenotomy ......................... 213
Adaptation to Denervation ....................... 217
Muscle Fiber Specificity to Reinnervation ....... 220
Chapter Summary ................................. 225
References ......................................... 226

CHAPTER 6
Skeletal Muscle Response to Injury .......... 229
Chapter Overview ................................. 229
Educational Objectives ......................... 229
Causes of Muscle Regeneration ................. 229
Morphology of the Degeneration–Regeneration Cycle ........ 230
Muscle Properties after Regeneration .......... 234
Clinical Application to Muscular Dystrophy .......... 237
Muscle Response to Exercise-Induced Injury ........ 242
Chapter Summary ................................. 267
References ......................................... 268
CONTENTS

CHAPTER 7
Skeletal Muscle Adaptation to Spasticity ................................. 271

Chapter Overview ............................................................. 271
Educational Objectives ...................................................... 271
Skeletal Muscle Spasticity .................................................... 271
Is Spasticity Increased Use or Decreased Use? ...................... 274

Fiber-Type and Fiber Size Changes with Spasticity .............. 275
Biomechanical Studies of Spastic Limbs ............................ 277
Muscle Fiber Length in Spastic Muscle .............................. 281
Mechanical Changes in Spastic Muscle Tissue ................... 286
Summary and Future Directions ......................................... 289
References ........................................................................ 290
Index .............................................................................. 293
