Reviewers xii
Acknowledgments xiii

CHAPTER 1	The Warm-Up	1
	Introduction	2
	What is exercise physiology and why study it?	2
	Overview of the text	3
	The exercise response	6
	Training	11
	Detraining	20
	Exercise and training as stressors	20

METABOLIC SYSTEM UNIT

25

CHAPTER 2	Energy Production	26
	Introduction	27
	Cellular respiration	28
	The regulation of cellular respiration and ATP production	45
	Fuel utilization at rest and during exercise	49
CHAPTER 3	Anaerobic Metabolism during Exercise	55
	Introduction	56
	The energy continuum	56
	Anaerobic energy production	58
	Measurement of anaerobic metabolism	62
	The anaerobic exercise response	67
	Male versus female anaerobic exercise characteristics	79
	Anaerobic exercise characteristics of children	80
	Anaerobic exercise characteristics of older adults	83
CHAPTER 4	Aerobic Metabolism during Exercise	92
	Introduction	93
	Laboratory measurement of aerobic metabolism	93
	Aerobic exercise responses	94
	Field estimates of energy expenditure during exercise	107
	Efficiency and economy	111
CHAPTER 5	Metabolic Training Principles and Adaptations	126
	Introduction	127
	Application of the training principles for metabolic enhancement	127
	Metabolic adaptations to exercise training	134

	The influence of age and sex on metabolic training adaptations	141
	Detraining in the metabolic system	142
CHAPTER 6	Nutrition for Fitness and Athletics	150
	Introduction	151
	Nutrition for training	151
	Nutrition for competition	169
	Eating disorders	176
CHAPTER 7	Body Composition: Determination and Importance	187
	Introduction	188
	Body composition assessment	189
	Overweight and obesity	203
CHAPTER 8	Body Composition and Weight Control	219
	Introduction	220
	The caloric balance equation	220
	The effects of diet, exercise training, and diet plus exercise training on body composition and weight	231
	Application of the training principles for weight and body composition loss and/or control	242
	Making weight for sport	246
		
CARDIOVASCULAR-RESPIRATORY SYSTEM UNIT		255
CHAPTER 9	Respiration	256
	Introduction	257
	Structure of the pulmonary system	257
	Mechanics of breathing	259
	Respiratory circulation	261
	Minute ventilation/alveolar ventilation	261
	Measurement of lung volumes	264
	Partial pressure of a gas: Dalton's law	267
	Regulation of pulmonary ventilation	269
	Gas exchange and transport	274
CHAPTER 10	Respiratory Exercise Response, Training Adaptations, and Special Considerations	284
	Introduction	285
	Response of the respiratory system to exercise	285
	The influence of sex and age on respiration at rest and during exercise	299
	Respiratory training adaptations	305
	Detraining and the respiratory system	307
	Special considerations	308
CHAPTER 11	The Cardiovascular System	322
	Introduction	323
	Overview of the cardiovascular system	323
	Cardiovascular dynamics	339
	Regulation of the cardiovascular system	342
	Measurement of cardiovascular variables	344
CHAPTER 12	Cardiovascular Responses to Exercise	355
	Introduction	356
	Cardiovascular responses to aerobic exercise	356

- Cardiovascular responses to static exercise 368
- Cardiovascular responses to dynamic resistance exercise 372
- Male-female cardiovascular differences during exercise 374
- Cardiovascular responses of children and adolescents to exercise 377
- Cardiovascular responses of older adults to exercise 380

- CHAPTER 13 Cardiorespiratory Training Principles and Adaptations 388**
- Introduction 389
 - Application of the training principles 389
 - Training principles and physical activity recommendations 402
 - Cardiovascular adaptations to aerobic endurance training 403
 - Cardiovascular adaptations to dynamic resistance training 409
 - The influence of age and sex on cardiovascular training adaptations 411
 - Detraining in the cardiorespiratory system 415
- CHAPTER 14 Thermoregulation 422**
- Introduction 423
 - Exercise in environmental extremes 423
 - Basic concepts 423
 - Thermoregulation 428
 - Exercise in the heat 429
 - Cardiovascular demands of exercise in the heat 432
 - Influence of sex and age on the exercise response in heat 439
 - Heat illness 440
 - Exercise in the cold 444
- CHAPTER 15 Cardiovascular Disease Risk Factors and Physical Activity 451**
- Introduction 452
 - Progression of coronary heart disease 452
 - Physical activity and cardiovascular risk factors 454
 - Children and the cardiovascular risk factors 472

NEUROMUSCULAR-SKELETAL SYSTEM UNIT

483

- CHAPTER 16 Skeletal System 484**
- Introduction 485
 - Skeletal tissue 485
 - Measurement of bone health 489
 - Factors influencing bone health 492
 - Exercise response 494
 - Application of the training principles 494
 - Skeletal adaptations to exercise training 500
 - Skeletal adaptations to detraining 501
 - Special applications to health and fitness 502
- CHAPTER 17 Skeletal Muscle System 512**
- Introduction 513
 - Overview of muscle tissue 513
 - Macroscopic structure of skeletal muscles 514
 - Microscopic structure of a muscle fiber 515
 - Molecular structure of the myofilaments 518
 - Contraction of a muscle fiber 520
 - Muscle fiber types 525

- CHAPTER 18 Muscular Contraction and Movement 534**
 Introduction: exercise—the result of muscle contraction 535
 Muscular force production 535
 Muscular fatigue and soreness 543
 Measurement of muscular function 551
 The influence of age and sex on muscle function 554
- CHAPTER 19 Muscular Training Principles and Adaptations 562**
 Introduction 563
 Application of the training principles 563
 Neuromuscular adaptations to resistance training 572
 Male-female resistance training adaptation comparisons 575
 Resistance training adaptations in children and adolescents 576
 Resistance training adaptations in older adults 576
 Muscular adaptations to aerobic endurance training programs 577
 Muscular adaptations to concurrent training 577
 Neuromuscular adaptations to detraining 578
 Special application: muscular strength and endurance and low-back pain 578
- CHAPTER 20 Neuromuscular Aspects of Movement 583**
 Introduction 584
 The nervous system 584
 Neural control of muscle contraction 586
 Reflex control of movement 589
 Volitional control of movement 596
 Flexibility 597
 Physiological response to stretching 603
 Prestretching has no apparent effect on risk of injury 605
 Flexibility and overuse injuries 605
 Application of the training principles to flexibility training 606
 Adaptation to flexibility training 607
 Balance 608
 Application of the training principles to balance 611
 Adaptation to balance training 612

NEUROENDOCRINE-IMMUNE SYSTEM UNIT

617

- CHAPTER 21 Neuroendocrine Control of Exercise 618**
 Introduction 619
 Exercise as a stressor that activates the neural and hormonal systems 619
 The nervous system 621
 The endocrine system 627
 Role of the endocrine system in exercise 632
 Hormonal responses to exercise 634
 Hormonal adaptations to training 642
- CHAPTER 22 The Immune System, Exercise, Training, and Illness 647**
 Introduction 648
 The immune system 648
 The immune response to exercise 656
 Training adaptation and maladaptation 664
 Selected interactions of exercise and immune function 672

- APPENDIX A** Units of Measure, the Metric System, and Conversions between the English and Metric Systems of Measurement 681
- APPENDIX B** Metabolic Calculations 683
- APPENDIX C** Answers to Check Your Comprehension 695

Glossary 703
