1. Which of the following are considered periodontal diseases?
   A. Gingivitis
   B. Periodontitis
   C. Both A and B

2. All of the following are categories of periodontitis EXCEPT:
   A. Necrotizing periodontal disease
   B. Periodontitis
   C. Periodontitis as a manifestation of systemic disease
   D. Gingivitis

3. Which of the following falls in the category of “other conditions” affecting periodontium?
   A. Dental plaque--induced gingival diseases
   B. Gingival disease modified by medications
   C. Traumatic occlusal forces
   D. Necrotizing periodontal disease

4. Which of the following is a classification of periodontal disease that is described as a group of periodontal diseases that could be associated with an ascorbic acid deficiency?
   A. Non--plaque-induced gingivitis
   B. Endocrine, nutritional, and metabolic diseases
   C. Genetic/developmental disorders
   D. Drug-induced gingival enlargement

5. All of the following are Gingival Diseases EXCEPT:
   A. Drug-induced gingival enlargement
   B. Traumatic lesions
   C. Gingival pigmentation
   D. Necrotizing stomatitis

6. Which of the following describes Stage III Periodontitis?
   A. Moderate periodontitis
   B. Severe periodontitis with potential for additional tooth loss
   C. Periodontitis with a rapid rate of progression

7. Which of the following are the three major forms of periodontitis?
   A. Necrotizing periodontitis, periodontitis, periodontitis as a manifestation of systemic disease
   B. Stage I, Stage II, Stage III
   C. Grade A, Grade B, Grade C

8. Peri-implant disease includes all of the following EXCEPT:
   A. Peri-implant health
   B. Peri-implantitis
   C. Peri-implant mucositis
